

STEEL FRAME ALUMINUM SHIELD

Pacific Shoring's steel framed aluminum shield is more than just your standard trench shield. This shield is designed to be compatible with adjustable spreaders, hydraulic struts and even aluminum modular panels, making this a fully modular shield. Aluminum corner posts easily pin to the steel channels, allowing for a 3-sided or 4-sided configuration.

This shield walls are made of 3" thick extruded aluminum panels that are framed with high tensile steel for added durability and strength. These hybrid shields are available in a full range of sizes and are ideal for light utility installations and municipalities who require durability and depth.
